

Double-glass monocrystalline solar photovoltaic panels

Overview

These panels combine the high efficiency of monocrystalline silicon with the rugged protection of dual tempered glass layers. Let's explore why architects, contractors, and homeowners increasingly prefer this technology. They are particularly suitable for high-reflectivity environments, such as white roofs or. Glass-glass module structures (Dual Glass or Double Glass) is a technology that uses a glass layer on the back of the modules instead of the traditional polymer backsheet. Originally double-glass solar panels were heavy and expensive, allowing the lighter polymer backing panels to gain most of the. Based on 210mm silicon wafer and 132 half-cut monocrystalline PERC cell, the Evo 6 Series photovoltaic panels comes with several innovative design features allowing higher output power up to 670W. Excellent temperature coefficient and low irradiation performance result in higher power generation.
