Overview

As an efficient energy storage method, thermodynamic electricity storage includes compressed air energy storage (CAES), compressed CO₂ energy storage (CCES) and pumped thermal energy storage (PTES). Three typical thermodynamic electricity storage technologies are: 1. AA-CAES Advanced adiabatic compressed air energy storage; 2. B-HP-ORC Basic heat pump. In order to achieve the “dual carbon” goal, China has vigorously developed wind and solar energy. As of the end of June 2023, China's cumulative installed power generation capacity reached 2.1 billion kW. 2.1. Basic principle CAES converts electricity into heat energy and pressure energy for storage to realize the time-space transfer of electricity. In fact, as an energy carrier.
