

How to install and connect photovoltaic solar energy to the grid

Overview

For financial benefit. Connecting your solar PV system to the grid allows you to take advantage of the FIT, which gives you a fixed amount of money for each kWh of electricity you generate. On top of these payments, your installer should do most of the hard work for you. Once your system is set up, your installation company will supply all of the necessary information to your District Network Operator. For smaller systems, the installer will generally only need to inform the DNO of your connection within 28 days, providing that your system complies with engineering recommendations. In addition to the tests carried out by the DNO, you will also have to provide your FIT supplier with an Energy Performance Certificate (EPC). This certificate shows the energy efficiency. If you bought your property after 1st October 2008, you should already have one, as the builder or previous owner was legally obliged to provide it. If you purchased your property...
