

Is antimony used in solar glass

Overview

Antimony compounds, particularly antimony trioxide (Sb_2O_3) and sodium antimonate (NaSbO_3), are utilized as fining agents in the manufacturing of patterned solar glass to enhance light transmission. However, the composition of solar glass varies, particularly in terms of antimony content, depending on the production method. Newer modules increasingly use Sb-free or low-Sb float glass, which is easier to recycle and poses. Antimony (Sb) is a commonly used refining agent in solar glass. Solar Panel Stewardship will support material traceability and collection streams that will identify this "invisible" metal and support its safe recovery and availability for high-tech markets including reuse in new PV panels. Yet it sits on every major critical mineral list—from the European Union to the United States, Japan, and Australia—to yes, the CMI. because it. The proposed PhD thesis is part of the ANR GRISBI project (2026–2030), which aims to optimize the recycling of glass from photovoltaic (PV) panels.

2. Antimony Containing Solar PV Panels Antimony is used in solar panel glass to improve stability of the solar performance of the glass upon exposure to ultraviolet radiation and/or

ANTIMONY (Sb) IN SOLAR MODULES

Because of both toxicity and recycling complications, bans and restrictions on Sb use in solar glass are increasing, driving demand for Sb-free, low-iron solar glass formulations.

The Dark Side of Solar Glass: Antimony, Geopolitics and the Energy ...

In solar glass specifically, small amounts of antimony oxide help stabilize optical properties under years of UV exposure, reducing “solarization” (the tendency of glass to brown or

China's Export Ban Continues to Push Antimony Market

Antimony is used as a clarifying agent in photovoltaic (PV) glass — and, in 2023, solar PV installations reached record levels in China (already one

The Future of Antimony: Rising Prices, Supply Chain

Antimony is vital for many industries, including batteries, solar panels, flame retardants, and ammunition. Antimony sulfide, or Stibnite, is the principal

Addressing uncertain antimony content in solar glass for recycling

Solar glass can be either low-iron patterned glass or low-iron float glass. Both can be recycled if the quality is acceptable, but this depends on the glass composition and the end product to be produced.
