

# Is it OK to install the communication base station inverter on the roof

## Overview

Solution: Refer to the product manual for installation spacing, the bottom of the conventional installation inverter is  $\geq 500\text{mm}$  from the ground; For tilt-mounted installations, the distance from the inverter AC-DC waterproof joint to the roof should be  $\geq 300\text{mm}$  to prevent. When constructing a new mobile communication system, setting up an isolated lightning protection system is recommended. This ensures that the separation distances to the sensitive mobile communication technology are maintained and no lightning currents can enter the hosting structure. Risks of collateral damages in deploying Telco Equipment in your rooftop. Chapter 4 This. Micro inverters can be connected to the wireless router through the built-in Wi-Fi module, string inverters and energy storage inverters can be connected to the wireless router through the external Wi-Fi data collector, the Wi-Fi module or data collector will transmit the data of the inverter. PV inverters often need to be installed outdoors, which requires attention to installation details to combat environmental challenges. You can mount the inverter with the back panel or with the enclosure lid to the roof. This will allow for better heat dissipation.
