

# New energy storage for base station communication equipment

## Overview

This article outlines a replicable energy storage architecture designed for communication base stations, supported by a real deployment case, and highlights key technical principles that ensure uptime and long service life. Users can use the energy storage system to discharge during load peak periods and charge from the grid during low load periods, reducing peak load demand and saving electricity. Today, modular lithium-based energy storage systems have become the preferred solution for ensuring continuous operation, even under unstable grid or off-grid conditions. Remote base stations often rely on independent power systems. Fuel generators are unsuitable for long-term use without. When natural disasters cut off power grids, when extreme weather threatens power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment. 45V output meets RRU equipment.
