

Solar power generation is popular again

Overview

Solar generation rose by 636TWh in 2025, marking the largest increase of any power source on record. This generation growth rate is close to the level envisaged from 2023 to 2030 in the Net Zero Emissions by 2050. Policymakers in some of the world's largest economies are reducing support for solar power generation. Even so, Goldman Sachs Research expects rapid growth in the sector, with global solar installations set to rise to 914 Gigawatts (Gw) in 2030, 57% above 2024 levels. Led by the rapid rise of solar PV, renewables' expansion is taking place in a context of. Ember's analysis of the latest data on monthly capacity installations shows that the world is on track to reach 593 GW of solar installations by the end of this year. grew by almost 3%, capping an almost 9% expansion in demand since 2021, while solar has more than doubled in the same window, including 28% growth in 2025. In 2025, solar accounted for just over 8.

Solar and Wind Power Has Grown Faster Than Electricity Demand

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,

Clean energy generation exceeded rise in global electricity demand in ...

Solar power met three-quarters of the increase in electricity demand in 2025, with the remainder mostly met by wind power. Electricity generation from fossil fuels fell by 0.2%.

Global solar generation met three-quarters of new power demand in

According to Ember's Global Electricity Review 2026, renewables accounted for 33.8% of global power generation in 2025.

Solar power continues to surge in 2024

The massive step up in solar capacity installations in 2023 and 2024 has shifted perceptions around solar's role in the energy transition. Solar will likely add more GWs in 2024 than
