

Telecom site energy system cost savings Bangladesh

Overview

The study presents a research project aimed at optimizing energy consumption in telecommunications power systems. Bangladesh can significantly reduce electricity costs, strengthen energy security, improve public finances, and create thousands of new jobs by accelerating its clean energy transition, according to a new report from the Institute for Energy Economics and Financial Analysis (IEEFA). The report. The system is expected to generate about 0.13 gigawatt-hours of clean energy annually, reducing carbon emissions by around 60 tonnes and saving an estimated US\$12,600 in energy costs each year, the company said in a press release. The collaboration aims to cut carbon emissions and lower operational costs by deploying solar hybrid power. The objective of this study is to develop a hybrid energy storage system under energy efficiency initiatives for telecom towers in the poor grid and bad grid scenario to further reduce the capital expenditure (CAPEX) and operational expenditure (OPEX) besides reducing carbon emissions.
