

The lowest export price of solar modules

Overview

For much of 2024 and early 2025, developers benefited from ultra-cheap solar modules priced at just US\$0.09 per watt, as Chinese manufacturers sold at losses to clear excess inventory. High-efficiency modules: The average price has risen to €0. Compared with January 2026, this represents a 13.5% increase. Weekly spot price report for 182mm modules will be based on the 182*182-210mm format from June 2024 onwards due to the slim price gap among varying formats. Module prices continued rising, driven by upstream polysilicon, wafer, and cell cost increases. 28/W, ending years of dramatic fluctuations as supply-demand dynamics rebalance and weak suppliers exit the market. In doing so, we differentiate between the main technologies available on the market. Since 2009, pvXchange has provided a unique price index for the European market, which has become an invaluable. Beijing's decision to eliminate solar export VAT rebates tackles deep structural problems: massive oversupply, unsustainable pricing, and growing trade tensions. This policy forces industry consolidation while raising international module costs 10-15% through 2026.
